

Calcium Molasses

Assists in calving and lambing sickness

Properties: Hypocalcaemia commonly related to post calving or lambing is caused by calcium deficiency. Calcium needs to be supplemented to grazing pasture. Calcium Molasses blocks make the process simpler. Calcium Molasses is a palatable block providing sodium, calcium and molasses. Contains Ammonium chloride which research shows assist in the absorption of calcium as an acid salt.

Ingredients: Salt, Calcium carbonate, Molasses, Mono di calcium phosphate and Ammonia chloride.

NUTRIENT ANALYSIS	
Sodium Chloride (NaCl) Max	62.00%
Sodium Chloride (NaCl) Min	54.00%
Ground Limestone (lime) Min	24.00%
Molasses	10.00%
Phosphoric acid (rock phosphate)	3.90%
Fluorine (F) Max	0.02%
Ammonium Chloride (NH ₄ Cl)	0.50%

20kg Block

(Hard pressed)

Recommended feeding based on 1 block per number of head

Put out from midway through pregnancy

Number of Sheep	Number of Cattle	Number of days
70	10	28

The above feeding rates are a guide only. Variances due to pasture quality, climate, workload and age of the animal will give different results. This product is suitable for ruminants only and not recommended for other animals. Please use the feeding table as a guide only and ensure feeding guide is introduced gradually to all animals, as unobserved diet changes can be detrimental to final results or the animals health.
